Time Frame 10 minutes

Essential Question(s)

Summary

Week 7 of the Concurrent Enrollment Tool Kit is designed to help guide students in the way they look at their progress so far in their university-level courses. Students will evaluate their current standing in the course, identify their expected grade for the semester, and work to figure out what they need to do to receive that grade.

Learning Goals

- Assist students in identifying their current progress in the semester.
- Help students in predicting a realistic end grade based on current progress in their course.
- Guide students to determine necessary steps to take for achieving their desired grade.

Discussion Starters

Consider starting the discussion by asking:

- How has the semester gone so far when you think back on the last several weeks?
- How are you feeling about things in your course so far?
- Have there been any unexpected challenges in terms of the assignments you have completed up to this point?

Discussion Questions

To guide this week's discussion, consider asking some of the following questions:

- Generally, how have you felt about the grades you have gotten so far in your courses?
 - How much of your total grade have these assignments counted for so far?
- If you received this grade at the end of the semester, would you be alright with that?
- What can you do to either improve your grade or maintain the grade you currently have?

Next Steps

For next week, ask students to:

- Consider which strategies they have used to study so far in this semester.
 - Have these been effective?
- Think about any improvement goals they have for the remainder of the semester.

Research Rationale

Research shows a clear and strong link between concurrent enrollment and increased student academic performance (Jones, 2014; Dingess, 2018). Several studies have also found that students who participate in concurrent enrollment have time to acclimate to the college environment and thus earn higher grades in their postsecondary careers (Allen & Dadgar, 2012; Dingess, 2018). This opportunity to build momentum also provides an avenue for those students who might carry complex social and educational challenges from high school as they transition into the university setting (Wang et al., 2015). A consistent concern with students as they transition from high school to PSE is that many of them might have difficulty in fully acclimating to the rigor and expectations of university-level coursework (Taylor, 2015; Vargas et al., 2017). This is especially apparent when looking at students who identify as first-generation college students, as they might feel overwhelmed by everything from student support to the specifics of financial aid (Lee et al., 2022). Concurrent enrollment offers a bridge between the familiarity of high school and the frontier of higher learning, building on the initial benefits of concurrent enrollment in high school to build toward greater academic momentum fueled by a smooth transition from high school to university (Wang et al., 2015).

To expand on the inherent benefits associated with concurrent enrollment programs, these programs are most successful when students are provided with extra guidance in how to navigate this new academic environment (Witkowsky & Clayton, 2020). Though students in concurrent enrollment programs might be high-performing, it is helpful to remember that they are still high school students and stand to benefit from “wraparound” services that counselors can provide as a bridge between high school and university-level expectations (Witkowsky & Clayton, 2020). Whether partnering directly with specific higher education institutions as part of the concurrent enrollment program or not, wraparound services can still be designed with the university course expectations in mind.

These tool kits are designed as conversation starters to provide the kind of ongoing support that allows concurrent enrollment students to be most successful (Johnson et al., 2021; Lile et al., 2018). Spanning a range of topics between goal setting and writing expectations, each conversation serves as an opportunity for relationship building and mentoring with students. For students who might not know which questions to ask or which resources to look for, these tool kits can help concurrent enrollment coordinators set a foundation for success for students to draw on after high school.
