Time Frame 10 minutes

Essential Question(s)

- Assist students in identifying a realistic end grade based on their current progress.
- Assist students in identifying the benefits and drawbacks of taking a W on their course.
- Guide students to determine whether or not to drop the course with a W.

Summary

Week 12 of the Concurrent Enrollment Tool Kit is designed to help guide students in thinking about the end of their semester. By encouraging thoughtful questions and early reflection, students will be able to gauge the grade they can expect while also considering whether or not to withdraw from the course if they expect to receive a low grade.

Learning Goals

Discussion Starters

Consider starting the discussion by asking:

- Now that we're in Week 12, how do you think this semester has been going?
- How are you feeling about things in your course so far?
- Have there been any unexpected challenges in terms of the assignments you've completed since we last talked about it?

Discussion Questions

To guide this week's discussion, consider asking some of the following questions:

- How are you feeling about your class and the grade you expect?
 - Is this different from what you predicted in Week 7?
- Is this the kind of grade that you want on your transcript?
 - If not, have you considered withdrawing with a W instead of receiving a lower grade?
 - When is the withdrawal deadline for your course?
- Have you considered the benefits and drawbacks of taking a W?

Next Steps

To prepare for next week, ask students to:

- Consider which steps they need to take to finish out their semester strong.
- Start planning for big assignments and thinking about the grade they want to receive on them.

Research Rationale

Research shows a clear and strong link between concurrent enrollment and increased student academic performance (Jones, 2014; Dingess, 2018). Several studies have also found that students who participate in concurrent enrollment have time to acclimate to the college environment and thus earn higher grades in their postsecondary careers (Allen & Dadgar, 2012; Dingess, 2018). This opportunity to build momentum also provides an avenue for those students who might carry complex social and educational challenges from high school as they transition into the university setting (Wang et al., 2015). A consistent concern with students as they transition from high school to PSE is that many of them might have difficulty in fully acclimating to the rigor and expectations of university-level coursework (Taylor, 2015; Vargas et al., 2017). This is especially apparent when looking at students who identify as first-generation college students, as they might feel overwhelmed by everything from student support to the specifics of financial aid (Lee et al., 2022). Concurrent enrollment offers a bridge between the familiarity of high school and the frontier of higher learning, building on the initial benefits of concurrent enrollment in high school to build toward greater academic momentum fueled by a smooth transition from high school to university (Wang et al., 2015).

To expand on the inherent benefits associated with concurrent enrollment programs, these programs are most successful when students are provided with extra guidance in how to navigate this new academic environment (Witkowski & Clayton, 2020). Though students in concurrent enrollment programs might be high-performing, it is helpful to remember that they are still high school students and stand to benefit from “wraparound” services that counselors can provide as a bridge between high school and university-level expectations (Witkowski & Clayton, 2020). Whether partnering directly with specific higher education institutions as part of the concurrent enrollment program or not, wraparound services can still be designed with the university course expectations in mind.

These tool kits are designed as conversation starters to provide the kind of ongoing support that allows concurrent enrollment students to be most successful (Johnson et al., 2021; Lile et al., 2018). Spanning a range of topics between goal setting and writing expectations, each conversation serves as an opportunity for relationship building and mentoring with students. For students who might not know which questions to ask or which resources to look for, these tool kits can help concurrent enrollment coordinators set a foundation for success for students to draw on after high school.
